Digital Literacy Project Report

Name: Aaryan Saxena

Registration Number: 25BCE10619

Branch: Computer Science Engineering

Year: First Year

Course Code: CSE0001

1. Introduction

In today's world, digital skills are essential for every student. Whether we are learning online or communicating professionally, we depend on digital platforms in almost every aspect of our lives. This project aims to help students learn how to use digital tools effectively, safely and responsibly.

This project allowed me to dive into various digital literacy areas, like building a professional online identity, using coding and teamwork tools, mastering email etiquette and getting to grips with cyber safety. Each task gave me hands-on skills that will be valuable not just while I'm at university, but also as I move into my career.

This project is a great way to boost our confidence and understanding of the digital world, and it also helps one to use technology more effectively in their studies and careers.

2. Task1Write-up

For this task, I created a digital literacy awareness info graphic using Canva. I chose Canva because it is user-friendly and provides a wide range of templates and design elements that make it easy to create visually appealing content.

Inmyinfographic,Icoveredimportantaspectsofdigitalliteracysuchasunderstanding what digital literacy means, useful digital tools for students, safe internet practices, and emailetiquette.Iexplainedhowstudentscanusetoolslikecalendars,note-takingapps, and cloud storage to improve productivity. I also included safety tips like using strong passwords, avoiding phishing scams, and managing privacy settings. Additionally, I highlightedtheimportanceofmaintainingaprofessionalonlinepresenceandfollowing proper email communication.

While designing the info graphic, I found it interesting to organize information in a clear and attractive way. The most challenging part was selecting the right layout and balancing text with visuals. Overall, this task helped me improve both my creativity and my understanding of digital literacy concepts.

3. Task2Write-up

For this task, I created and updated my profiles on GitHub, LinkedIn, and Kaggle to build a strong digital presence. These platforms are widely used by students and professionals for learning, networking, and showcasing skills.

GitHub is used to store and manage projects, which helps in building a portfolio. LinkedInisaprofessionalnetworkingplatformwherestudentscanconnectwithothers, explore opportunities, and share achievements. Kaggle is a platform for learning data science and solving real-world problems through datasets and competitions.

Iplantoactivelyusetheseplatformsoverthenextfouryearstoimprovemytechnical skills, build projects, and connect with professionals. This will help me prepare for internships and future job opportunities.

4. Task3Write-up

For this task, I explored both coding practice platforms and collaboration tools. I used HackerRank to solve a beginner-level programming problem, which helped me understand basic coding concepts and improve my problem-solving skills.

In addition to this, I created a Google Form titled “Digital Literacy Awareness Quiz” consisting of three questions. The form includes both multiple-choice and short-answer questions. I also linked the responses to a Google Sheet, which allows easy data collection and analysis.

This task helped me understand how coding platforms can improve technical skills and how tools like Google Forms can be used for collaboration and data management. These tools will be very useful in my academic journey.

5. Task4Write-up

Digital communication plays a very important role in our daily lives, especially in academic and professional environments. Poor communication can sometimes create misunderstandings or problems.

For example, if a student sends an email without a proper subject or uses informal language, the professor may not take it seriously or may misunderstand the request. This can lead to delays or rejection of the request.

To avoid such issues, it is important to follow proper email etiquette, including using a clear subject line, polite language, and a structured format. This task helped me understand the importance of professional communication and how small mistakes can create big problems.

6. Task5Write-up

While researching cybercrime, I learned how common on line frauds like UPI scams have become in recent years. It was surprising to see how easily people can be tricked into sharing sensitive information or approving fake payment requests.

I realized that lack of awareness is one of the main reasons behind such incidents. Even a small mistake, like clicking on an unknown link, can lead to serious consequences.

After completing this task, I have decided to be more careful while using digital platforms. I will always verify any payment request and avoid sharing personal or financial information with unknown sources.

7. Conclusion

This project helped me understand the importance of digital literacy in today'sworld. Through different tasks, I learned how to use digital tools effectively, create a professional online presence, and communicate properly through emails.

I also explored coding platforms and collaboration tools, which will be useful in my academic journey. The cybercrime task made me more aware of online threats and the importance of staying safe while using digital platforms.

Overall, this project improved my practical knowledge and confidence in using technology responsibly and effectively.
